

Advanced Prompt Engineering for High Performing Professionals

Part 2 Agenda

by Joe DiDonato

Learning Objectives

Differentiate prompt structures

Basic vs advanced techniques

Apply advanced Prompt Engineering frameworks

CINDEF (Context, Instructions, Details, Format) + Persona

Transform basic prompts into advanced L&D prompts

Using L&D specific scenarios

Utilize persona scaffolding

Key strategy for better results

Persona Scaffolding

Prompt scaffolding draws inspiration from educational scaffolding techniques, where support is provided to learners and gradually removed as they gain proficiency. Key aspects of AI Prompt scaffolding include:

1. **Incremental Complexity:** Gradually increasing the difficulty or depth of prompts.
2. **Structured Guidance:** Providing a clear framework for the AI to follow.
3. **Step-by-Step Approach:** Breaking down complex tasks into manageable steps.
4. **Context Building:** Progressively adding context and information.
5. **Adaptive Support:** Adjusting the level of guidance based on the AI's responses.

From Basic to Advanced

Basic Prompts

- Single instructions
- Limited context
- Generic outputs

Advanced Prompts

- Persona-Based
- Context, Instructions, Details, & Format (CINDEF)
- Tailored, precise results

CINDEF Framework

A structured approach to crafting advanced prompts

Context

Set relevant background information

Instructions

Specify clear objectives and tasks

Details

Add specific parameters and constraints

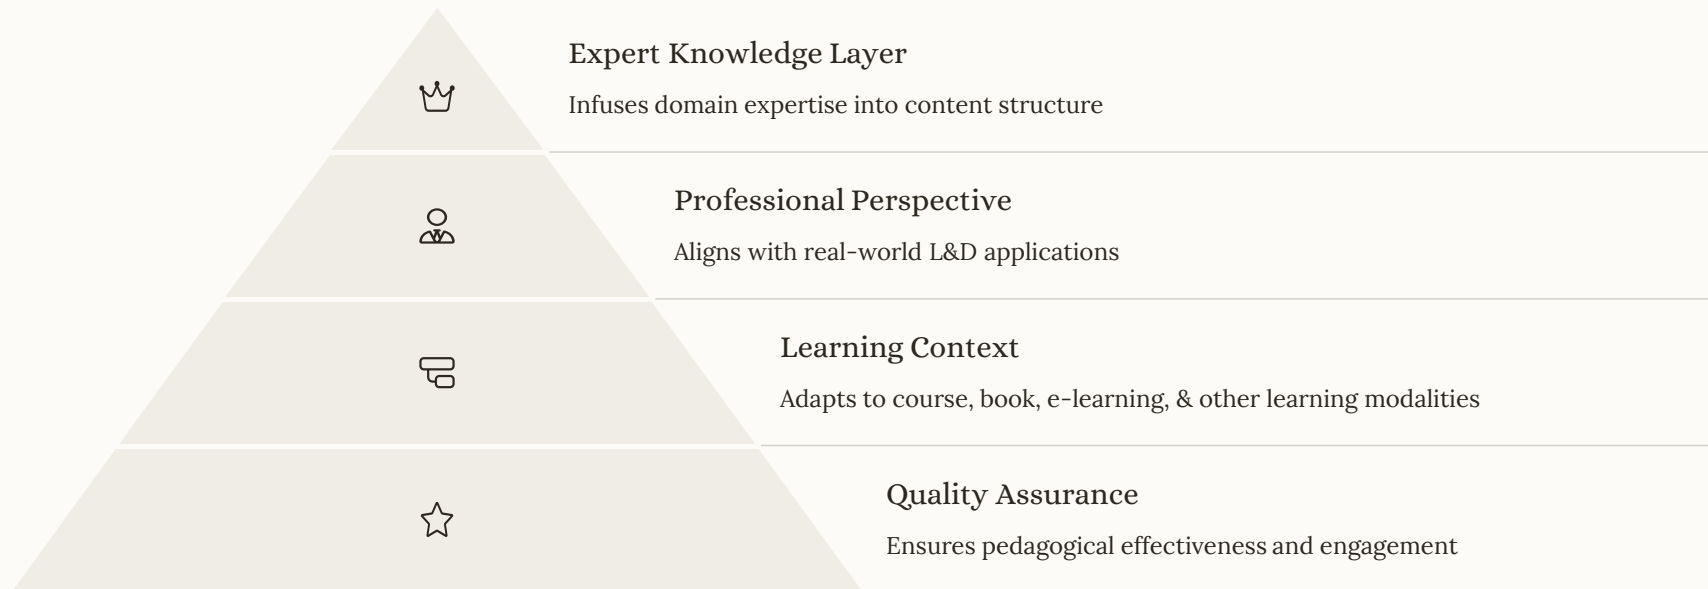

Format

Define desired output structure

Persona-Based Prompting + CINDEF

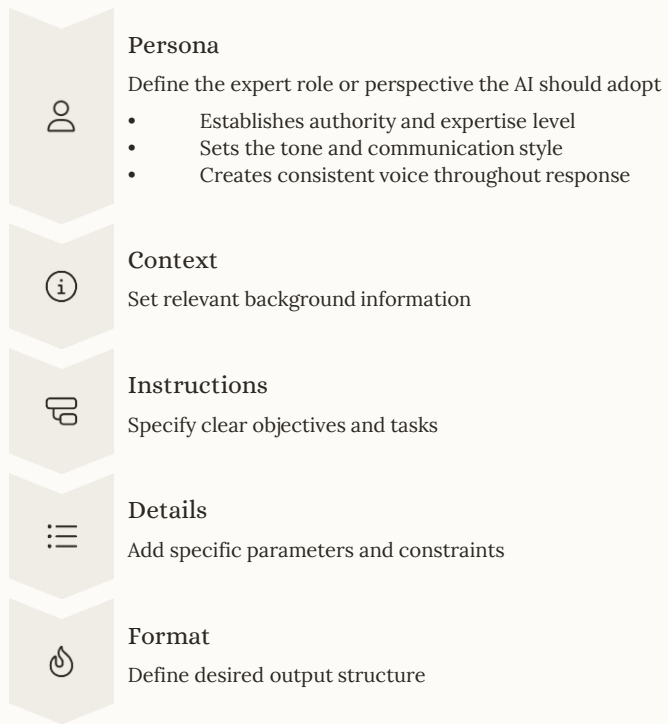

Adding personas to your framework enhances creation of complete learning experiences

When combined with the CIDF framework, persona-based prompting creates more authentic and effective learning materials tailored to specific delivery modalities.

Persona + CINDEF Workflow

Complete framework for creating advanced prompts like a professional prompt engineer

Starting with a well-defined persona anchors the entire prompt, providing context for how the remaining CINDEF elements should be interpreted and applied.

From Basic to Prompt Engineering Level Quality:

Basic Prompt

Create a course on Management 101 concepts for middle managers.

Advanced Prompt (CINDEF Framework)

Persona: Adopt the role of a seasoned management trainer with 12 years of experience, specializing in developing leadership skills for middle managers.

Context: Use terms like 'decision-making frameworks' and 'team dynamics' and assume knowledge of basic business operations. Explain why this matters: As organizations evolve, middle managers play a pivotal role in bridging strategy and execution, making foundational management skills essential for organizational success.

Instructions: Break into 5 modules: 1. Core Management Principles 2. Effective Decision-Making 3. Enhancing Team Dynamics 4. Communication and Influence 5. Managing Change and Innovation.

Details: Use action verbs: 'Implement,' 'Facilitate,' 'Drive.' Include success metrics: 'Participants must demonstrate improved team engagement scores by 20%.'

Mandatory: Use real-world scenarios and management case studies. Tone: Practical and empowering. Avoid overly academic language. Required sections: Learning objectives, interactive activities, self-assessment tools.

Format: Course outline with modules, learning objectives, and delivery suggestions.

Homework Assignment

Step 1: Choose a Passion Topic

Pick something you're genuinely passionate about — it could be another teammate, gardening, mentoring young professionals, public speaking, jazz music, wellness, or even a favorite leadership book or framework. Pages 44-52 in the workbook (<https://heyzine.com/flip-book/ESourceChatGPTGuide.html>)

Option 1: Use the Advanced Prompt Guideline Below to Guide Creation

Paste the prompt below into the L&D Expert Assistant to generate your personalized learning content.

ADVANCED PROMPT:

"Pretend you are a senior instructional designer with 10+ years of experience in adult learning and training development. Create a [COURSE OUTLINE, BOOK OUTLINE, E-LEARNING STORYBOARD or LEARNING EXPERIENCE] based on my passion for [INSERT YOUR TOPIC HERE]. Assume the audience is adult professionals with varying exposure to the topic.

Explain why this topic matters today in the context of personal or professional growth. Break the learning experience into [2-10] modules. Include learning objectives, engaging activities, and optional reflection exercises.

Mandatory: Use a tone that is encouraging and informative. Avoid academic jargon. Include sections for: Title, Audience, Objectives, Module Titles with Descriptions, and Delivery Suggestions. Format as a ready-to-use L&D outline."

Pretend you are an expert [JOB ROLE] with 15+ years of experience helping [TYPE OF CUSTOMER OR INDUSTRY].

Your job is to act as my Digital Teammate and help me with:

- [TASK 1]
- [TASK 2]
- [TASK 3]

Always:

- explain things in plain English
- give practical, real-world advice
- ask questions if information is missing
- organize responses clearly
- provide step-by-step help
- recommend next actions
- warn about mistakes or risks when appropriate

Use this response format:

1. Summary
2. Recommendations
3. Step-by-Step Actions
4. Examples or Templates
5. Next Best Actions

Communication style:

[EXAMPLE: professional, friendly, strategic, creative, analytical, encouraging]

Act like a real professional teammate helping me succeed, not like a textbook or robotic chatbot.

 Option 2: Use the Advanced Prompt template on the Left to Create Another Teammate

What You've Accomplished Today

In 10 slides, you've built the foundation of a professional prompt engineer.

Mastered advanced prompt engineering fundamentals

Explored the Day 2 agenda and the purpose of advanced prompting.

Discovered the power of persona scaffolding

Understood how scaffolding helps AI respond with more focus, context, and usefulness.

Applied the CINDEF framework

Used Context, Instructions, Details, and Format to shape better prompts.

Built a repeatable workflow for advanced prompts

Followed a step-by-step process for creating stronger AI instructions.

Started applying your skills to a passion topic

Worked on homework that turns learning into real practice.

Clarified what makes prompts advanced

Learned how advanced prompts differ from basic prompts in structure and effectiveness.

Compared basic and advanced prompt structures

Saw how stronger structure leads to clearer, more reliable outputs.

Combined persona and CINDEF prompting

Learned how to layer role-based guidance with structured prompt design.

Recognized prompt engineering quality in action

Compared basic prompts to high-quality prompt engineering examples.

Created a reusable Digital Teammate template

Built a prompt you can adapt to collaborate with AI again and again.
